Education Panel: "What PM Competency Does Your Organization Expect From New Employees?"

Abstract: The PM education provided at colleges to graduating students and promising future project managers entering the workforce should be academically rich. It should also be robust enough to handle the more complex technical subject matter and leadership competencies expected in the workplace. This panel discusses the new "Guidelines for Undergraduate Project Management Education" from Project Management Institute released in early 2015 and other related PM competency frameworks to answer the question "Are these competencies good enough for your organization?" Is it possible that with maturity of PM as a profession there is opportunity to recognize additional key competencies that must be addressed in PM education at the college level?
